TRANSFORMATIONS IN 3D

Homogeneous representation of a 3D point (x, y, z) is (xh, yh, zh, h). where h is the homogeneous term.

TRANSLATION

$$\begin{bmatrix} 1 & 0 & 0 & t_x \\ 0 & 1 & 0 & t_y \\ 0 & 0 & 1 & t_z \\ 0 & 0 & 0 & 1 \end{bmatrix}$$
SCALING.

$$\begin{bmatrix} S_x & 0 & 0 & 0 \\ 0 & S_y & 0 & 0 \\ 0 & 0 & S_z & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

can be changed for uniform scaling.

ROTATION

In 2D we were rotating around origin. In 3D rotation will be around an axis.

Rotation around Z-axis in counter-clock direction. X & Y changes. Z remains fixed.

$$\begin{bmatrix} \cos\theta & -\sin\theta & 0 & 0 \\ \sin\theta & \cos\theta & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

Rotation around X-axis

$$\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & \cos\theta & -\sin\theta & 0 \\ 0 & \sin\theta & \cos\theta & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

Rotation around Y-axis

$$\begin{bmatrix} \cos\theta & 0 & \sin\theta & 0 \\ 0 & 1 & 0 & 0 \\ -\sin\theta & 0 & \cos\theta & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

REFLECTION

Reflection around XY plane, Z value -ve.	Reflection around XZ plane, Y -ve	Reflection around YZ plane, X -ve
$\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & -1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$	$\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & -1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$	$\begin{bmatrix} -1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$

| Around X-axis	Around Y-axis	Around Z-axis
$\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & -1 & 0 & 0 \\ 0 & 0 & -1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$	$\begin{bmatrix} -1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & -1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$	$\begin{bmatrix} -1 & 0 & 0 & 0 \\ 0 & -1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$

Around Origin ? All diagonal elements, except 'h', -1.

ROTATION OF AN ARBITRARY POINT AROUND AN INCLINED AXIS

1. Translate origin to a, b, c : T_1
2. Rotate s.t. vector (l, m, n) coincides with 1-axis, say Z.
   - So, rotate s.t. vector coincides with xZ plane: T_2
   - Then rotate so that it coincides with Z-axis : T_3
3. Then rotate the point by θ : T_4
4. Reverse of 2
5. Reverse of 1.

$$\therefore T = T_1^{-1} T_2^{-1} T_3^{-1} T_4 T_3 T_2 T_1$$

THE
